

```
marks: [Plot.LineY(points, {
```

```
export function mountPlot(host: HTMLElement) {}
```

```
const chart = Plot.plot({
```

x:"label",y:"value",stroke:"#2563eb"

```
host.append(chart);
```

WebGL fragment shader, say. At the highest, visual interfaces

You should be able to ascend the ladder without having to start over from scratch.

Future of data work: Q&A with Milk & Best

margin graphical interface that can "export" to PlotDev when needed.

for data with overview, zoom and filter, details on demand...

In my dream, there's a ladder of abstraction. On the low-level end for constructing
