

```
export function mountPlot(host: HTMLElement) {
```

```
const chart = plot.plot({
```

```
host.append(chart);
```

x:"label",y:"value",stroke:"#2563eb"

```
marks: [Plot.LineY(points, {
```

You should be able to ascend the ladder without having to start over from scratch.

Future of data work: Q&A with Milk & Best

OpenGL Shader, say. At the highest, visual interface

margin graphical interface that can "export" to PlotDev when needed.

In my dream, there's a ladder of abstraction. On the low-level end for constructing

for data with overview, zoom and filter, details on demand...
